Greetings Foundation Partners!

I feel so fortunate to share this great work with all of you! As individuals, families, organizations, and foundations near and far, your desire to be a force for good is inspiring.

This past year, you supported our first VITALITY Gala since the pandemic, celebrating healthcare for West Michigan women and contributing over one million dollars in support of the Foundation.

You funded groundbreaking technologies and critical programs to support our patients and care providers, such as the Dragon Ambient Experience technology or Critical Incident Stress Management program, which you’ll learn more about on the following pages.

You are effecting change in the West Michigan healthcare landscape by supporting innovative ways to bring health equity to the forefront of care.

YOU are making a world of difference for your neighbors, family members and ultimately, yourself the next time you need care.

The Foundation strives to be an incubator and activator for healthcare innovation, and we couldn’t do this critical work without a single one of you. So, thank you.

With Gratitude,

Jaime Counterman, Foundation Director
Transforming healthcare through philanthropy

The University of Michigan Health-West Foundation utilizes philanthropy to relentlessly advance our nonprofit health system’s ability to deliver world-class care right here in West Michigan. We are funded by the generosity of our community to provide training, equipment, and innovative care.

The Foundation is committed to:

- Excellence & Access for All
- World-Class Patient Care
- Enhancing Employee Experience
New technology helps neurosurgery teams see the big picture

The next generation of microsurgery is crystal clear, bigger than life and visible in high-resolution 3D at University of Michigan Health-West, where the intricate work of neurosurgeons can now be seen by everyone in the operating room.

This means better workflows for surgical teams – and ergonomic relief for neurosurgeons. Thanks to a combination of robotics and augmented reality, neurosurgeons no longer need to hunch over microscopes for hours while twisting their bodies into the best angle to work on the brain, spinal cord and nerves.

The Aesculap Aeos Robotic Digital Microscope, obtained with funding from the University of Michigan Health-West Foundation, offers multiple advantages to the UM Health-West Neurosciences team. In addition to showing microscopic views on monitors in the OR, it provides precise robotic-guided positioning, 3D imaging and “fluorescence” to light up tumors, aneurysms, tissues or other target areas.
Upgraded Ergonomics

Surgeon-Controlled Precision Robotics

See the Big Picture

Fluorescence-Guided Surgery

The Future is Digital
“This is an amazing innovation for our work and great support for our team,” said Chief Medical Officer Dr. Ronald Grifka. “In traditional microsurgery, the surgeon might have to keep their head tilted at a 60-degree angle for hours at a time. We know they can perform better for their patients – and have greater job satisfaction – if they are comfortable and relaxed in their work.”

Neurosurgeon Bryan Figueroa, MD, welcomes the ergonomic relief but said the contribution to teamwork is what makes the system a game-changer. He cited a recent example where he collaborated with an ear, nose and throat surgeon to treat a patient.

“Everybody could see what was happening with the operation,” Figueroa said, noting surgeries might require a team of seven to 10 people at once. “It’s like conducting a symphony. When we all can anticipate what needs to happen next, response time is faster and we can stay perfectly in synch.”

“We’re grateful for a progressive Foundation that decided to invest in this technology,” Figueroa said. “This is really the next generation of microsurgery.”
Eighty years ago, our very first patient was an expectant mother. It’s no surprise that Women’s Health has been an emphasis for University of Michigan Health-West since our founding. Decades and tens of thousands of births later, we remain a leader in comprehensive healthcare for women at every age and stage of life.

This year we celebrated our Women’s Health services at VITALITY Gala presented by Buist Electric. **We hosted nearly 1,000 attendees and raised over $1 million in support of the critical work of the Foundation.**

With their generous donations, our sponsors and guests took their place in a cause that dates from our founding and extends into a vibrant and hopeful future. Thank you for celebrating and investing in the well-being of our community.
The benefit to patients is becoming readily apparent. By reducing the documentation burden, we allow providers to focus on delivering the best care for their patients and stronger patient-provider relationships.

~ Dr. Lance M. Owens
Chief Medical Information Officer
Al-powered documentation with the Dragon Ambient Experience system

If one thing can stand between the patient and the provider during a visit, it’s the computer. That’s why University of Michigan Health-West, thanks to funding provided by the Foundation, invested in an AI-driven ambient voice technology that records clinical conversations, contextualizes the words, and intelligently creates documentation.

The pilot began in the fall of 2021 and has since expanded to all primary care physicians. As an organization that values innovation, UM Health-West puts an emphasis on technology that enhances the patient-provider experience. The Dragon Ambient Experience (DAX) system is meeting that requirement by preserving the intimacy of that relationship with more fulfilling experiences and better outcomes for all.

As donors to the UM Health-West Foundation, you allow us to fund progressive technologies outside the scope of the health system’s budget providing opportunities to transform the patient experience.
Financial overview for fiscal year 2022

Where our community contributions come from.

How the Foundation financially supported University of Michigan Health-West.
American Heart Association HeartCode Transition
This grant supports the initial conversion to American Heart Association’s HeartCode Complete Program which will allow UM Health-West to offer basic life support, advanced cardiac life support, and pediatric life support classes in-house.

Critical Incident Stress Management
The Foundation granted funds to implement Critical Incident Stress Management which will provide staff the opportunity to process potentially traumatic situations in real time and provide a network of trained individuals who are accessible 24/7 to lead a team debriefing after these events.

Organizational Suicide Prevention Education
This grant provides suicide prevention training to all UM Health-West employees to help reduce or eliminate suicides in our patient population.

Nursing Leadership Reboot Workshop
The Foundation is funding one-on-one training with Dr. Rose Sherman. Her program interviews up to fifty nursing leaders and gathers themes to aid in strategic planning as it pertains to nurses’ changing values and needs within our organization.
